

Dear Parents,

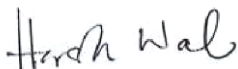

Development in Science and Technology has a deep impact in every aspect of our lives. In today's world it is imperative to apply theoretical concepts learnt in real life situations. Therefore, after careful study and survey of the different resources available we have chosen the STEM (Science, Technology, Engineering and Mathematics) programme for our students. This is an interdisciplinary approach aimed at providing an insight into the practical aspects of Science and Technology.

Schools all over the World are using STEM to equip the students with necessary skills to stimulate critical thinking skills and develop a scientific bent of mind which would enable them to solve problems and develop the required skills for this highly competitive World. Introducing this in the curriculum will radically change the concept of teaching learning. This will make learning of Science more exciting and rewarding for the students, leaving a lasting impression on their minds. We will perhaps be the first school to introduce this in Bangladesh.

The STEM kit will be provided along with the textbooks and will prove to be precious learning resource. However, these kits are not to be opened by the students and will be opened only in the classroom on instructions of the teachers depending upon the topic being taught. Some kits will be kept in school under the custody of the teachers and provided to each student as and when required during the course of the year.

This integrated approach of teaching would develop creativity, analytical skills, and application of knowledge to real life situations. Furthermore, this would encourage the students to think out of the box. These skills are the prime need of the hour for success in any chosen career.

With best wishes
Yours sincerely

HARSH WAL

(Principal)
